

Sk8Kings Axe Series Racing Decks

Winning Races since 2004

The AXE Series has been a leader in innovation since its launch in 2004. Every aspect of this deck design was carefully planned for function by top pro racer Richy Carrasco and built into our custom proprietary racing molds.

The AXE was the first all wood racing deck that boldly introduced the non-cambered concave kick tail form to the racing market and quickly began proving the benefits of this design. The breakthrough concept of mounting the truck in the angle of the kick tail makes confident back foot placement and greater traction happen naturally. This kick tail – combined with just the right degree of tapered concave – created the perfect balance of responsive turning and control – providing the platform for performance at speed.

Sizes and features to suit every need -- setups customized for each rider uniquely.

If you ride an AXE -- you are part of the AXE Army . . .
